

# PRODUCT DATA SHEET

Bioworld Technology,Inc.

# PKAγ cat (P5) polyclonal antibody

Catalog: BS1953 Host: Rabbit Reactivity: Human

#### **BackGround:**

Activation of PKA occurs when cAMP binds to the two regulatory subunits of the tetrameric PKA holoenzyme resulting in release of active catalytic subunits. Three catalytic (C) subunits have been identified, designated  $C\alpha$ ,  $C\beta$  and  $C\gamma$ , that each represent specific gene products.  $C\alpha$  and  $C\beta$  are closely related (93% amino acid sequence similarity), whereas  $C\gamma$  displays 83% and 79% similarity to  $C\alpha$  and  $C\beta$ , respectively. Activation of transcription upon elevation of cAMP levels results from translocation of PKA to the nucleus where it phosphorylates the transcription factor cAMP response element binding protein (CREB) on serine 133 which in turn leads to TFIIB binding to TATA-box-binding protein TBP1, thus linking phospho-CREB to the Pol II transcription initiation complex.

## **Product:**

1 mg/ml in Phosphate buffered saline (PBS) with 0.05% sodium azide, approx. pH 7.2.

## **Molecular Weight:**

~ 40 kDa

#### **Swiss-Prot:**

P22612

## **Purification&Purity:**

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

# **Applications:**

WB: 1:500~1:1000 IHC: 1:50~1:200

# Storage&Stability:

Store at  $4\,\mathrm{C}$  short term. Aliquot and store at -20  $\mathrm{C}$  long term. Avoid freeze-thaw cycles.

#### **Specificity:**

PKAγ cat (P5) polyclonal antibody detects endogenous levels of PKAγ cat protein.

#### **DATA:**

Immunohistochemistry (IHC) analyzes of PKA $\gamma$  cat (P5) pAb in paraffin-embedded human ovary tissue.

### Note:

For research use only, not for use in diagnostic procedure.
