

TCEAL1 (E123) polyclonal antibody

Catalog: BS3956

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

TCEAL1 (transcription elongation factor A (SII) protein 3), also known as p21, SIIR or pp21, is a member of the TFS-II family. Transcription elongation factors of the TFS-II family are responsible for releasing RNA polymerase II (Pol II) from transcriptional arrest. DNA arresting sites can result in locked ternary complexes if elongating RNA polymerases are trapped. Transcription elongation factors function to activate the intrinsic RNA cleavage activity of RNA polymerases. This allows the RNA polymerase to cleave the nascent transcript, thereby forming a new 3'-terminus to resume elongation. TCEAL1 is a 157 amino acid nuclear protein that is ubiquitously expressed. TCEAL1 may exert its effects via protein-protein interactions with other transcriptional regulators rather than via direct binding of DNA.

Product:

1 mg/ml in Phosphate buffered saline (PBS) with 0.05% sodium azide, approx. pH 7.2.

Molecular Weight:

~ 18 kDa

Swiss-Prot:

Q15170

Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB: 1:500~1:1000

IHC: 1:50~1:200

Storage&Stability:

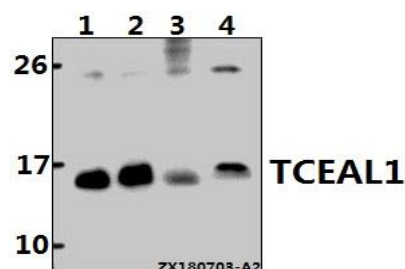

Store at 4 °C short term. Aliquot and store at -20 °C long

term. Avoid freeze-thaw cycles.

Specificity:

TCEAL1 (E123) polyclonal antibody detects endogenous levels of TCEAL1 protein.

DATA:

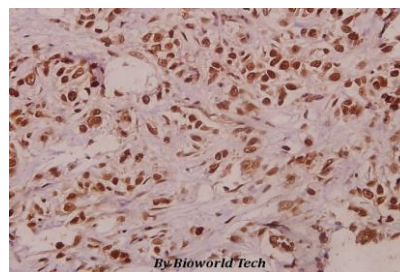

Western blot (WB) analysis of TCEAL1 (E123) pAb at 1:500 dilution

Lane1:A2780 whole cell lysate(20ug)

Lane2:PC3 whole cell lysate(20ug)

Lane3:The Ovary tissue lysate of Rat(40ug)

Lane4:3T3-L1 whole cell lysate(40ug)

Immunohistochemistry (IHC) analyzes of TCEAL1 (E123) pAb in paraffin-embedded human colorectal carcinoma tissue at 1:50.

Note:

For research use only, not for use in diagnostic procedure.
