

MSK1 (phospho-T581) polyclonal antibody

Catalog: BS4846

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

MSK-1 is a mitogen and stress activated protein kinase-1 which belongs to the AGC family of kinases and is related in structure to the ribosomal p70 S6 kinase subfamily. MSK-1 can be activated by ERK1/2 and SAPK2 /p38 MAP kinase. It is also known to be required for the phosphorylation of CREB, ATF1 H3 and HMG-14 in response to mitogen and stress. Similar to RSK, MSK-1 contains two kinase domains (N-term and a C-term). Once phosphorylated on Thr581 and Ser360 by ERK1/2 and SAPK2/p38, MSK-1 autophosphorylates on at least 5 sites. Of these autophosphorylation sites Ser212 and Ser376 get phosphorylated by the C-terminal kinase domain of MSK-1 which is essential for the catalytic activity of the N-terminal kinase domain.

Product:

1 mg/ml in Phosphate buffered saline (PBS) with 15 mM sodium azide, approx. pH 7.2.

Molecular Weight:

~ 90 kDa

Swiss-Prot:

O75582

Purification&Purity:

The antibody was affinity-purified from mouse antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB: 1:500~1:1000

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

p-MSK1 (T581) polyclonal antibody detects endogenous levels of MSK1 protein when phosphorylated at Thr581.

DATA:

Western blot (WB) analysis of p-MSK1 (T581) polyclonal antibody at 1:500 dilution

Lane1: Hela cell lysate treated with UV (UV, 24h)

Lane2: sp2/0 cell lysate treated with UV (UV, 24h)

Lane3: Rat liver tissue lysate

Note:

For research use only, not for use in diagnostic procedure.
