

Transcription Initiation Factor IIB Recombinant Rabbit mAb

Catalog: BS49434

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

This gene encodes the general transcription factor IIB, one of the ubiquitous factors required for transcription initiation by RNA polymerase II. The protein localizes to the nucleus where it forms a complex (the DAB complex) with transcription factors IID and IIA. Transcription factor IIB serves as a bridge between IID, the factor which initially recognizes the promoter sequence, and RNA polymerase II. [provided by RefSeq, Jul 2008]
