

PLC γ2 polyclonal antibody

Catalog: BS61288

Host:

Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

Phosphoinositide-specific phospholipase C (PLC) plays a critical role in the initiation of receptor mediated signal transduction through the generation of the two second messengers, inositol 1,4,5-triphosphate and diacylglycerol from phosphatidylinositol 4,5-bisphosphate.There are many mammalian PLC isozymes, including PLC β1, PLC β 2, PLC β 3, PLC β 4, PLC γ 1, PLC γ 2, PLC δ 1, PLC δ 2 and PLC ɛ. After stimulation of the collagen receptor glycoprotein VI in human platelets, PLC y2 associates with several tyrosine-phosphorylated proteins (Syk, SLP-76, Lyn, linker for activation of T cells (LAT) and the FcR γ chain), which bind to its C-terminal SH2 domain. PLC γ 1 associates with Syk in B cells, but PLC γ 2 does not associate with Syk in platelets. The C-terminal SH2 domain is involved in the regulation of PLC γ 2. In addition, Btk can induce PLC $\gamma 2$ tyrosine phosphorylation and initiate calcium moblization in CD72-stimulated B lymphocytes.

Product:

1 mg/ml in Phosphate buffered saline (PBS) with 0.05% sodium azide, approx. pH 7.3.

Molecular Weight:

~ 148 kDa

Swiss-Prot:

P16885

Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB: 1:500~1:1000

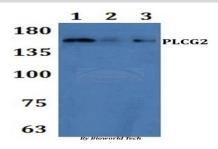

Storage&Stability:

Store at $4 \,^{\circ}{\rm C}$ short term. Aliquot and store at $-20 \,^{\circ}{\rm C}$ long term. Avoid freeze-thaw cycles.

Specificity:

PLC $\gamma 2$ polyclonal antibody detects endogenous levels of PLC $\gamma 2$ protein.

DATA:

Western blot (WB) analysis of PLC $\gamma 2$ polyclonal antibody at 1:500 Line1:HEK293T whole cell lysate Line2:H9C2 whole cell lysate Line3:Raw264.7 whole cell lysate
