

TSC2 polyclonal antibody

Catalog: BS61351

Host: Rabbit

Reactivity: Human, Mouse, Rat

BackGround:

Tuberous sclerosis complex (TSC) is an autosomal dominant genetic disorder characterized by mental retardation and the widespread development of distinctive tumors termed hamartomas. Two different genetic loci have been linked to TSC; one of these loci, the tuberous sclerosis-2 gene (TSC2), encodes a protein called tuberin and the other loci, tuberous sclerosis-1 gene (TSC1), encodes a protein called hamartin. Tuberin and hamartin interact with each other forming a cytoplasmic complex. Hamartin interacts with the ezrinradixin-moesin (ERM) family of Actin-binding proteins and inhibition of hamartin activity results in loss of cell adhesion. Hamartin is present in most adult tissues with strong expression in brain, heart and kidney.

Product:

1 mg/ml in Phosphate buffered saline (PBS) with 0.05% sodium azide, approx. pH 7.3.

Molecular Weight:

~ 200 kDa

Swiss-Prot:

P49815

Purification&Purity:

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB: 1:500~1:1000

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

Specificity:

TSC2 pAb detects endogenous levels of TSC2 protein.

DATA:

Western blot (WB) analysis of TSC2 pAb at 1:500 dilution

Lane1: Myla2059 whole cell lysate(40ug)

Lane2: HepG2 whole cell lysate(40ug)

Lane3: The Brain tissue lysate of Rat(40ug)

Lane4: AML-12 whole cell lysate(40ug)

Note:

For research use only, not for use in diagnostic procedure.
