

CD19 polyclonal antibody

Catalog: BS6980

Host: Rabbit

Reactivity: Mouse, Rat

BackGround:

Lymphocytes proliferate and differentiate in response to various concentrations of different antigens. The ability of the B cell to respond in a specific, yet sensitive manner to the various antigens is achieved with the use of low-affinity antigen receptors. This gene encodes a cell surface molecule which assembles with the antigen receptor of B lymphocytes in order to decrease the threshold for antigen receptor-dependent stimulation.

Product:

1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2
