

CA9 monoclonal antibody

Catalog: MB21741

Host: Mouse

Reactivity: Human

BackGround:

Carbonic anhydrases (CAs) are a large family of zinc metalloenzymes that catalyze the reversible hydration of carbon dioxide. They participate in a variety of biological processes, including respiration, calcification, acid-base balance, bone resorption, and the formation of aqueous humor, cerebrospinal fluid, saliva, and gastric acid. They show extensive diversity in tissue distribution and in their subcellular localization. CA IX is a transmembrane protein and the only tumor-associated carbonic anhydrase isoenzyme known. It is expressed in all clear-cell renal cell carcinoma, but is not detected in normal kidney or most other normal tissues. It may be involved in cell proliferation and transformation. This gene was mapped to 17q21.2 by fluorescence in situ hybridization, however, radiation hybrid mapping localized it to 9p13-p12.

Product:

Purified antibody in PBS with 0.05% sodium azide

Molecular Weight:

49.7kDa

Swiss-Prot:

Q16790

Purification&Purity:

The antibody was affinity-purified from mouse ascites by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

Applications:

WB:1/500 - 1/2000 FC:1/200 - 1/400

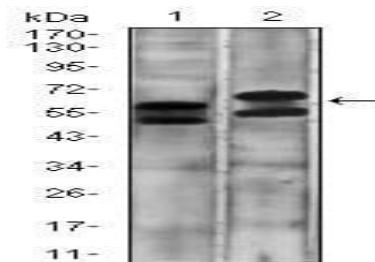

Storage&Stability:

Store at 4 °C short term. Aliquot and store at -20 °C long term. Avoid freeze-thaw cycles.

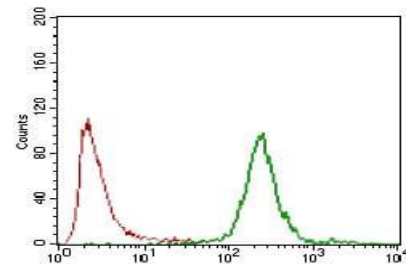

Isotype:

Mouse IgG1

DATA:

Western blot analysis using CA9 mouse mAb against A431 (1) and SW620 (2) cell lysate.

Flow cytometric analysis of NTERA-2 cells using CA9 mouse mAb (green) and negative control (red).

Note:

For research use only, not for use in diagnostic procedure.
