

CBX2 monoclonal antibody

Catalog: MB22037

Host: Mouse

Reactivity: Human, Mouse

BackGround:

This gene encodes a component of the polycomb multi-protein complex, which is required to maintain the transcriptionally repressive state of many genes throughout development via chromatin remodeling and modification of histones. Disruption of this gene in mice results in male-to-female gonadal sex reversal. Mutations in this gene are also associated with gonadal dysgenesis in humans. Alternatively spliced transcript variants encoding different isoforms have been noted for this gene.
