

M6PR monoclonal antibody

Catalog: MB23235

Host: Mouse

Reactivity: Human, Mouse

BackGround:

This gene encodes a member of the P-type lectin family. P-type lectins play a critical role in lysosome function through the specific transport of manose-6-phosphate-containing acid hydrolases from the Golgi complex to lysosomes. The encoded protein functions as a homodimer and requires divalent cations for ligand binding. Alternatively spliced transcript variants encoding multiple isoforms have been observed for this gene. A pseudogene of this gene is located on the long arm of chromosome X.
