

KRT14 monoclonal antibody

Catalog: MB23373

Host: Mouse

Reactivity: Human

BackGround:

This gene encodes a member of the keratin family, the most diverse group of intermediate filaments. This gene product, a type I keratin, is usually found as a heterotetramer with two keratin 5 molecules, a type II keratin. Together they form the cytoskeleton of epithelial cells. Mutations in the genes for these keratins are associated with epidermolysis bullosa simplex. At least one pseudo-gene has been identified at 17p12-p11.

Product:

Purified antibody in PBS with 0.05% sodium azide
